

Safe Water Tips

Visual Guide on Water Purification and Safe Drinking Practices

1. Source Water Safely

- Collect water only from clean and reliable sources (tap, borewell, treated supply).
- Avoid drawing water from contaminated ponds, rivers, or open storage.

Water Purification Methods

2. Purify Before Drinking

Common Methods:

- **Boiling:** Bring water to a rolling boil for at least 1–3 minutes.
- **Chlorination:** Add recommended chlorine tablets or liquid chlorine.

Ways to Purify Water

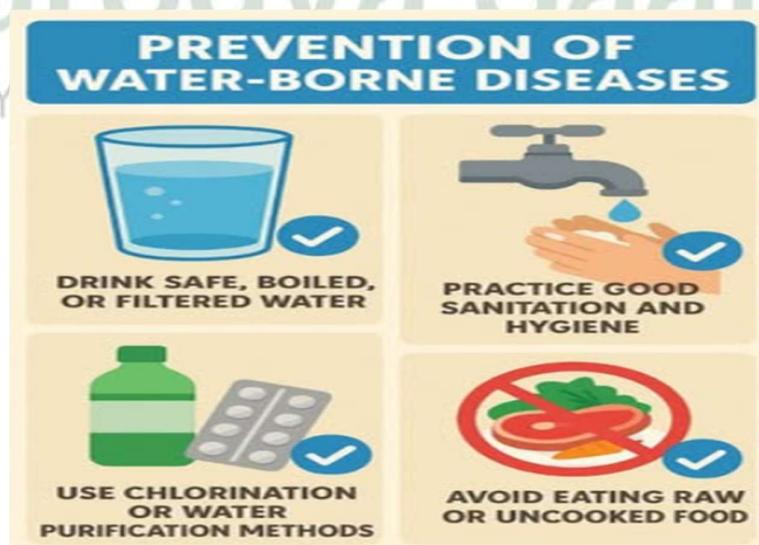

- **Filtration:** Use certified household water filters.
- **UV/RO Purifiers:** Use approved domestic purification systems if available.

3. Store Water Safely

- Use clean, covered containers.
- Do not dip hands or unclean utensils into drinking water.
- Use a ladle or pour directly from the container.
- Keep storage vessels away from dirt, insects, and sunlight.

4. Practice Good Hygiene with Water

- Wash hands with soap before handling drinking water.
 - Keep storage containers cleaned regularly with hot water and soap.
 - Separate drinking water containers from those used for other purposes.
-

5. During Emergencies (Floods/Outbreaks)

- Always boil or chlorinate water before drinking.
 - Avoid using untreated surface water.
 - Follow advisories issued by health authorities.
-

Quick Safety Reminders

- Boil it → Filter it → Store it Safe
- Drink only from safe, clean sources
- Protect children and elderly by giving them purified water only.

Key Message

"Safe Water = Healthy Life"

Every household should ensure water is purified, stored safely, and consumed responsibly to prevent waterborne diseases.
